**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1, 4-10, 13-15, 17-19, and 21-29 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Patent No. 6,112,318 to Jouppi et al. is the reference closest to the claimed invention. Jouppi et al. disclose a method comprising: providing at least one performance object containing a plurality of events; allowing a user to select a subset of events to be monitored during a collection session from said at least one performance object; programming performance counters associated with said subset of events selected to increment in response to an occurrence of a respective event; and periodically reading data stored in each of said performance counters associated with said selected subset of events during the collection session, wherein at least one of the performance counters associated with the selectable events is implemented using a hardware register and at least another one of the performance counters associated with the selectable events is implemented using a software variable. However, Jouppi et al. do not teach a plurality of performance objects being supported by a performance dynamic link library (performance DLL); and including all of the other limitations in the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
